

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE HOSPITAL CORPS OF THE NAVY.

AN OPPORTUNITY FOR YOUNG MEN SEEKING A DESIRABLE PROFESSIONAL CALLING AND AN OCCUPATION WITH SATISFACTORY PAY, EDUCATIONAL POSSIBILITIES, AND FUTURE POSITION.

Young men who desire to take up a calling where a satisfactory wage is obtained immediately and where there is every opportunity for advancement, instruction, education, and pleasant duty, combined with travel to foreign lands, or who contemplate the study of nursing or other allied subject, are invited to consider the Hospital Corps of the Navy as a field for employment or elementary training.

Hospital Corps Training School.

TRANSPORTATION OF WOUNDED.

Graduates of training schools for nurses of civil hospitals or men who have served as attendants in hospitals or institutions, graduates in pharmacy, first-aid workers, etc., will find in this branch of the naval service an opening to pursue their chosen profession with added training and inducement.

(3)

367646

The Hospital Corps of the Navy.

Service in the Hospital Corps may be undertaken as a life work, as the hospital apprentice may advance by gradual steps to the highest enlisted rating of chief pharmacist's mate (chief petty officer), and those who have the required qualifications and ability may further advance to warrant officer (pharmacist) and eventually, if successful, to the commissioned grade of chief pharmacist, with the rank of ensign, and ultimately, according to length of service, the pay and emoluments of lieutenant (i. e., from the lowest enlisted rating to commissioned rank), which position he holds for life, with retirement on satisfactory pay upon reaching the age of 64 years.

Hospital Corps Training School.

FIRST-AID IN THE FIELD.

The Hospital Corps of the Navy constitutes the largest portion of the medical department, whose members, together with the medical officers, represent the general medical, sanitary, public health forces (as represented by practitioners and board of health) available to any community, applied to the Navy. The men are for the most part young men from 18 to 45 years of age, of ability, good health, and exemplary habits.

A clean body, good character, a clear head, and alertness are requisite for success. No person temperamentally unfitted for this class of work will long remain. No person who is addicted to the use of intoxicating liquors or drugs or who at any time shows evi-

dence of intemperance or the morbid use of drugs (drug habitués) can be tolerated, enlisted, or retained in this corps.

The work of the Hospital Corps consists in attendance upon the sick of the Navy and Marine Corps, both officers and men, in naval

FIRST-AID DRILL.

hospitals, naval shore stations, on board ships, and upon expeditions of the Marine Corps. The service is not attended by particularly arduous duties and fits the members of the corps for future work in connection with their profession within and without the naval service.

The Hospital Corps of the Navy.

The work and duty of the Hospital Corps is of a distinct character peculiar to itself. No calling in civil life is similar to it, and therefore men must be trained for the work through the medium of actual experience in performing this duty. The duty is not along any one line but is a combination of lines, the arrangement varying with the circumstances. It is therefore plain that enlistment of men as pharmacist, drug clerk, druggist, embalmer, etc., as such can not be practicable; yet persons having such an education or experience are given most favorable consideration when applying for enlistment. Such men will find their previous training and experience of greatest value in performance of duty or when seeking advancement and

Hospital Corps Training School.

CLASS IN SESSION.

from time to time an opportunity to put their knowledge or ability to use.

Referring to the duties in brief, hospital corpsmen act as nurses to the sick, administer first-aid to accident cases, accompany expeditionary forces giving first-aid to injured and wounded, or such other first-aid treatment as may be indicated, assist at surgical operations, care of the medical stores and property, and compound medicines as is done in a civil drug store.

Some men take up and become proficient in chemistry, pharmacy, commissary work, X-ray, bacteriological work. Many of these men

The Hospital Corps of the Navy.

in later years, as a result of their training and specialization, are able to and do accept positions in laboratories of manufacturing concerns and return to civil life, having satisfied their desire for travel, and at the same time have learned a trade and served their country.

The work being of a more or less special type, it is necessary for the hospital corpsman to receive a preliminary course of instruction prior to undertaking the work in general service. For this purpose three training schools for the Hospital Corps have been established, one on the Atlantic coast, one on the Pacific coast, and one on the Great Lakes, to one of which the newly enlisted man is detailed and where he remains for a period of about six months under

instruction and is started upon his naval career on a sound basis and with a knowledge of and training in his special field and duty.

While these courses are all elementary in character a sufficient amount of matter is gone over to give a sound basis upon which future study may be pursued. The course consists of instruction in the following subjects:

Anatomy and physiology.—In this course the student receives general instruction upon the structure of the human body and the functions of its organs and muscles and nerve tissues, affording sufficient knowledge about the human body to make possible intelligent understanding of the care necessary in attending it when diseased.

The Hospital Corps of the Navy.

General nursing, first-aid, emergency surgery, operating room and surgical technic.—In this course it is endeavored to give didactically a theory of nursing of both surgical and medical cases, proper attendance upon the sick individual, his bed, his diet, etc., a clear presentation of antiseptics and asepsis, general cleanliness in relation to surgical procedures, how to assist an operator at a surgical operation, the application of dressings to first-aid and accident cases, both in the hospital and in the field with an expeditionary force.

Hygiene and sanitation, both general and field; diets, food, and the cooking and preparation of foods; the serving of foods to patients.—In this course an elementary introduction to hygiene, hygienic meas-

ures, both in the hospital, on the station or ship, personal hygiene, how to protect against diseases, fumigation, the application of antiseptics, ventilation, etc., the proper selection of food for the sick, its preparation, cooking, and proper serving to sick people.

Pharmacy, materia medica, chemistry, toxicology.—In this course an elementary knowledge of pharmacy, with simple compounding of prescriptions, administration and proper doses of simple medicines, a knowledge of the poisonous drugs used in medicine and their physiological effects, elementary chemistry, and the performance of simple chemical tests and other matters along this line which come within the purview of the hospital corpsman.

The Hospital Corps of the Navy.

A general introduction to the duties within a hospital, in a ward, and the sick bays, with relation to their proper ventilation, cleanliness, neatness, quietness, and appropriate care of persons confined therein.

aminations pertaining to medico-laboratory work are afforded, by means of which bright young men are able to avail themselves of an unusual opportunity for instruction along these lines.

Upon first reporting at the training station where the school is established a recruit is assigned to the seaman brigade for about three weeks to receive instruction in the care of his clothing and effects and general duties which pertain to the military side of the work. Upon completion of this three weeks of instruction he is immediately detailed to the training school for the Hospital Corps, where provisions are made for the stowage of his effects, placing of his hammock for sleep at night, and obtaining his food. The school is under the immediate charge of a medical officer and his several

EMERGENCY.**

assistants, who are usually chief petty officers of the Hospital Corps, and every effort is made to bring about a feeling of contentment and satisfaction, enthusiasm for the work, kindly suggestion, and advice, with special reference not only to the professional work but to the advisability of the candidate continuing should his aptitude for this special branch appear not to be marked.

In a few cases it has been found that a few men after reporting at the school show, either from a lack of preliminary education or from a distaste for this particular duty, an inaptitude for the Hospital Corps. The circumstances are kindly brought to the attention of the apprentice and an opportunity afforded him to change to another branch or leave the service. Every kindness and encouragement is

The Hospital Corps of the Navy.

shown the apprentice, and every effort is put forth to make him feel at home.

Upon completion of this course of training at the school the apprentice is detailed to one of the naval hospitals for a further period of practical instruction in actual performance of duty.

In the hospitals the apprentice is afforded the actual experience in the practical application of the instructions he has received at the school in caring for, nursing and feeding of patients, caring for

THE WORK IN DISTANT POSSESSIONS IS AN IMPORTANT AND INTERESTING FEATURE.

the property of the medical department, preparation of surgical and other dressings, and attendance upon surgical operations. Those specially versed or who show particular aptitude are assigned to special detail, such as laboratory, X-ray, stenographers and recorders, pharmaceutical work, etc. He remains at the hospital about six months, when he is then detailed to a sea-going ship, where he continues to perform a similar duty, using his knowledge which has

The Hospital Corps of the Navy.

been obtained under more favorable circumstances to meet the difficulties and unusualness of the work on board ship.

When serving with the Marine Corps, members of the Hospital Corps are frequently assigned to expeditionary forces operating on foreign shores. In this work many unusual and interesting experiences are encountered and frequently unusual opportunities afforded. Many members of the Hospital Corps operating with these forces have been awarded medals and letters of commendation for the excellence of their work.

Owing to the high character of the work required of the Hospital Corps and the future opportunities available to men of the corps,

A SICK BAY (WARD) ON BOARD A BATTLESHIP.

pains are taken to encourage men of highest qualifications to enter it. A fairly complete preliminary general education will be found not only desirable but also necessary, should the applicant desire continuous advancement. Those who have such an education may advance themselves steadily to the highest rating. For those, however, who are not so well versed every opportunity is afforded them to study and perfect themselves under the helpful guidance of medical officers, with a view to their future advancement when qualified for the ratings they seek. The highest efficiency in the medical department is dependent upon sufficient education and training, and

A HOSPITAL SHIP IS AS FULLY EQUIPPED AS ANY HOSPITAL ASHORE.

The Hospital Corps of the Navy.

therefore every effort is bent toward such development, and the hospital corpsmen therefore have distinct advantages constantly before them for obtaining information and instruction in their profession.

Enlistment.—Men may present themselves for enlistment at any Navy recruiting station, navy yard, naval station, or on board naval vessels having a medical officer on board. They should state their desire to enlist in the Hospital Corps, giving their qualifications and

ALLOWANCES FOR REENLISTMENT.

In order to obtain all the benefits of continuous service, a man must reenlist within *four* months after the date of his honorable discharge. He can reenlist the next day, or remain out of service for four months; but if he reenlists within four months he receives a bounty of four months' pay at the rate he was paid on discharge. Upon reenlistment his pay is increased by \$1.50 for honorable discharge. In addition, and as a compensation for a trained man and regardless of whether or not his service is continuous, his pay is increased by a further sum of \$5.50 per month for the first reenlistment and by \$3.30 per month for each subsequent reenlistment.

Further, if he is recommended by his captain, he is awarded a good-conduct medal after the first reenlistment and a good-conduct bar on each subsequent reenlistment. The holder of a good-conduct medal, pin, or bar is entitled to 82 cents a month for each medal, pin, or bar he possesses for all his subsequent enlistments that are continuous. These payments accumulate with each enlistment. Thus it will be seen that on second continuous enlistment the pay of any rating or branch of the service is increased by \$7 per month; on the third enlistment the pay is further increased by \$5.62, and so on through his naval career.
